

Triakhra Jahresbericht 2018: von uns unterstützte Projekte

Hohm Sahaj Mandir (USA)

1. Anschaffung von 2 zusätzlichen Regenwassertanks zur Wasserversorgung

Our property is not near to any kind of municipal services, so we collect as much rainwater as possible, to minimize the stress on our well and well pumps.

We purchased two additional 1,550 gallon tanks and hardware from Loomis Tanks

2. Erweiterung der Solaranlage zur Stromversorgung

Since we are located in a very rural area and are off the electrical grid, all of our electrical power is provided by solar electrical systems. As we have continued to build on the church property, the existing solar electrical systems were no longer sufficient to power additional buildings. We installed an additional solar electrical system

3. Anschaffung von Stapelstühlen für den Speisesaal

We frequently host weekend seminars at our church facility, during which we provide meals for those who attend. Our dining hall chairs were purchased second hand, and were mismatched, uncomfortable and were scratching the dining room floor. We purchased 52 matching stacking chairs

Hohm Sahaj Trust (Indien)

1. Neues Dach für den Speisesaal

The Anapurna space serves as a dining hall for giving food to the Sadhus, the local poor people and our guests. The existing roof at the Anapurna property was a traditional natural roof, however after time it had become old and was regularly falling down into the food. It needed to come down and we replaced it with a metal sheet roof.

2. Neues Bauvorhaben: Gästehaus mit Multifunktionsraum

Since a couple of years Triveni II has had the idea to build a new building with guest rooms and a multi purpose hall on the Anapurna property. This is so we can host guests and groups, have a more functional dining hall and kitchen space, and in the future be able to generate better income for Triveni II to support our existing charity projects and begin new charity projects.

So far with the new building we have started with taking measurements of the new plot, applied for a building permit, and working with an architect and civil engineer to define the new building and make solid plans for step by step building. Soon we will begin work to plan the sewage system for the new property and apply for a permit to bring government water here. We hope to start with physical building by September 2019.

Baugrundstück

3. Leeren des Abwassertanks

Unexpectedly this year the septic tank became full and starting overflowing back into the house through the toilets. We had break through the floor to access it and then empty it.

Schaffung eines Zugangs zum Abwassertank und Abpumpen des Inhalts

4. Sadhu Bhojan

The Sadhu bhojan takes place every week where we provide the sadhus and the local poor people with a good, nutritious meal, along with clothing, blankets, medical and travel expenses. Medical expenses include paying for regular medicines, glasses, parts to operations, general doctor consultations, scans and travels and expenses to hospitals etc.

Ausgabe von Essen, Kleidung und Decken an Sadhus und Arme.
Unterstützung bei medizinischer Versorgung.

Association Ramji (Frankreich)

1. Renovation of 4 toilets in the two houses

Ground floor – Big house

Second floor – Big house - Upstairs

2nd floor – Big house–North Bathroom

Bathroom little house

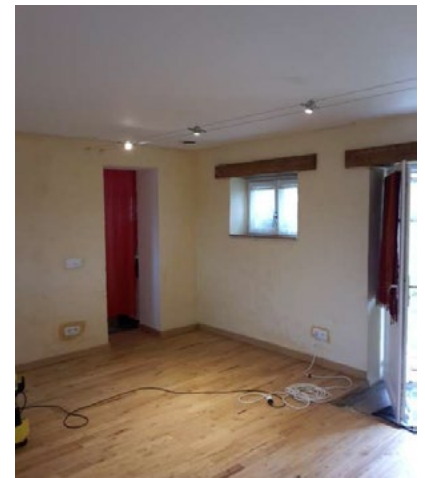

2. Final steps of renovation of the room in the little house in order to make an insulated meeting room (sliding door, lighting,...)

Sliding entry door of the room

Entry door from outside + lighting

Entry door from inside + lighting

3. Installation of a carpet in the children's space

This carpet has been installed in the children's hut to cover the rough wood floor.

4. Paint for shutters renovation

Some white paint has been purchased in order to renovate the shutters of the houses.

5. Replacement of the kitchen tap

6. Repair of the roof of the big barn

The aim was to replace the broken or missing tiles of the roof so as to avoid water coming in the barn.
